AB Cross-coupling Grignard reactions, catalyzed by Ni(DPPP)Cl₂, were used to

prepare the title oligomers, e.g. I, starting from the building block II.

Phys. properties of the oligothiophenes were investigated. E.g., the longest wavelength absorptions (π - π^*) and the emission maxima shift to lower energies as the extent of the π -system in the oligomers increases. Compared to polythiophenes, the oligothiophenes show enhanced

solubility. Cyclic voltammetry of the compds. showed that, starting with the

tetramer, even stable dications can be created. The trimer was doped with

I2 to give a charge-transfer complex with elec. conductivity (σ) = 10⁻² S/cm.
